*Cervical cancer awareness month January 2021 -
Prevention and early detection saves lives!*

- ❑ Cervical cancer continues to be a public health problem in India, accounting for about 1 lakh new cases and 60,000 women deaths every year...
- ❑ *Cervical cancer is a preventable cancer!*
- ❑ Effective primary (HPV vaccination) and secondary prevention approaches (screening for, and treating precancerous lesions) will prevent most cervical cancer cases
- ❑ *A comprehensive approach to prevent, screen and treat cervical cancer is the need of the hour!*
- ❑ A woman's best protection against cervical cancer is to have regular screening with a cervical PAP TEST. The PAP test looks for cell changes in the cervix that may become cancerous if not treated appropriately
- ❑ *A PAP TEST takes less than 5 minutes....Any abnormal PAP TEST requires confirmation by colposcopy and biopsy..*

PAP TEST saves lives !

COVID-19 has changed many things in life ... but the need to have a regular PAP TEST isn't one of them...

If you have not had your PAP TEST in the last 3-5 years, please schedule it now!

Department of Obstetrics and Gynecology at AIIMS, Mangalagiri offers PAP tests and colposcopy services and we request all to avail these services

As a part of observance of 'Cervical cancer awareness month - January 2021 programme' Department of Obstetrics and Gynecology at AIIMS, Mangalagiri offers Cervical cancer screening camp at Nuttaki PHC on 08.01.2021 for the benefit all women at Nuttaki village, Guntur District, AP

Cervical cancer awareness month - January 2021 programme

Free cervical cancer screening camp at Nuttaki PHC on 08. 01.2021

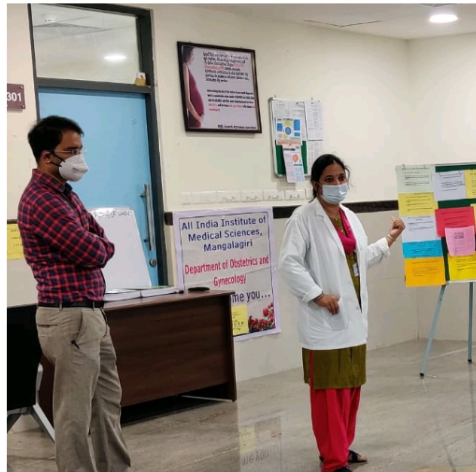

- *Cervical cancer develops in a woman's cervix (The cervix is the lower, narrow part of the uterus that opens into the vagina).*
- *Cervical cancer is the second most common cancer among Indian women. Approximately 1 lakh women are diagnosed with cervical cancer with 60,000 deaths every year in India. India accounts for 1/4th cervical cancer cases and deaths worldwide.*
- *Cervical cancer is a preventable cancer! Cervical cancer is preventable with HPV vaccination and regular cervical screening tests*
- *A woman's best protection against cervical cancer is to have regular screening with a cervical PAP TEST. The PAP TEST looks for cell changes in the cervix that may become cancerous if not treated appropriately.*
- *AIIMS Mangalagiri, Department of Obstetrics and Gynecology offers Cervical cancer screening camp at Nuttaki PHC on 08.01.2021 for the benefit all women at Nuttaki village, Guntur District, AP*
